Morbark's Big Chipper News

The Typhoon 20, a heavyweight among brush chippers, is joining to the world-class chipper line offered by Morbark, Inc. This 20-inch capacity unit offers arborists, contractors, and lot clearers the big chipping capacity and horsepower they need at a fraction of the capital cost of a whole tree chipper.

With the drum and feed wheel both 28½" wide, there is virtually no dead space, and the six knife pockets allow three full cuts per revolution, greatly increasing chipping efficiency. The 250 or 325 horsepower options on the Typhoon 20 create the ability to chip more material faster, and the increased airflow significantly reduces the chances of plugging, reducing time on the job.

The tough design of the Typhoon 20 is second to none. Equipped with a 4" x 8" center beam and a 66½" x 40½" infeed chute, the chipper not only accepts a wider variety of material, but the unit can also be fed with auxiliary loading equipment. The Typhoon 20 also has a redesigned pivot, which eliminates the yoke swing and increases down pressure efficiency.

This rugged unit comes with a 2½" lunet ring, 20,000-pound tandem axle suspension along with heavy-duty 3/8" chains and clasp hooks to secure the Typhoon 20 for efficient towing.

Offered standard with all these strong features, the Typhoon 20 gives a whole new meaning to the phrase “heavy-duty, dependable chippers by Morbark.”
