FOR IMMEDIATE RELEASE

Morbark Introduces Compact Disc Chipper

Winn, Michigan (May 13, 2008) – Using the proven design of the Model 30 RXL Chiparvestor as its foundation, Morbark has fashioned the new, compact Model 30 NCL. Eliminating the cab, loader and feed bed from the RXL model results in a lighter, easy-to-transport chipper that is powerful and productive.

With no feed bed, smaller landings can be utilized, allowing the Model 30 NCL to maneuver into tighter areas. However, its compact design doesn't mean less productivity. This unit is raising the bar for industry professionals who are chipping increasingly large diameter wood. With larger feed and throat openings, as well as power choices up to 1000 horsepower, this chipper is a real workhorse. The Model 30 NCL features the time-tested 83" disc with three or four knives.

Long-time dealer representative, Bud Iverson, of Nortrax Maine says, "Here is a chipper that will do anything you want when it comes to chipping tops, tree lengths and pieces down to 4 foot in length. With a load time of 15 minutes, it'll do 30 plus tons in a 45' trailer *and* it's cheap to run."

The Model 30 NCL is a great fit for biomass producers, clean chip producers or large stemwood operations, among others. In addition, this versatile unit is ideal positioned behind a stand alone debarker. For more information about the Morbark Model 30 NCL Chiparvestor or any Morbark equipment, please call 1-800-831-0042 or visit the website at www.morbark.com.
